(54) MOBILE COMMUNICATION SERVICE SYSTEM, AND MOBILE COMMUNICATION SERVICE METHOD

(57)Abstract:

PROBLEM TO BE SOLVED: To facilitate addition and extension of an added value service provided to each mobile node in a network including a mobile environment.

SOLUTION: A mobile node 600 transmits position registration information to a home agent 200 via an external agent 500, an AAAF 400 and an AAAH 100. Upon the receipt of the position registration information, the AAAH 100 extracts a service profile corresponding to the mobile node 600 from a service control database 300 and edits the profile into a form independently of a service class. The AAAH 100 distributes the edited service profile to the home agent 200 and the external agent 500. The home agent 200 and the external agent 500 provide a service requested by the mobile node 600 according to the distributed service profile.
